Education

PES University, India

Aug '23 - Aug '27

- Bachelors of Technology CSE | CGPA: **8.29**

Skills

Languages: Python, C++, JavaScript, SQL

Data & Analytics: Data Visualization, Power BI, Tableau, KPI Reporting, Dashboard Development, Trend and Data Analysis

Backend & Systems: REST APIs, Flask, MERN Stack

Databases: MySQL (Joins, Subqueries, Query Optimization)

Tools: Docker, Git, Apache Kafka

AI/ML: TensorFlow, PyTorch, Hugging Face, Agentic AI, RAG, LLM Integration (Groq, Gemini), Prompt Engineering

Professional Experience

Software Engineering Intern | Fiserv Gloabal Services

Jun '26 – Aug '26

- Engineered a Flask-based release intelligence platform integrating Confluence REST APIs with BeautifulSoup HTML parsing, replacing hours of manual RC table analysis with automated, team-level signoff dashboards that surface Pending RTI, Pending RC, and deliverable gaps in seconds — directly accelerating release cycle decision-making
- Architected a real-time source-freshness detection system using Confluence version metadata diffing, 60-second polling, and browser Visibility/Focus APIs across 5 report pages, backed by a thread-safe session store (threading.Lock) with auto-expiry — eliminating stale-data risk in high-stakes release sign-off workflows

Research Intern & Lead Developer | Multimodal Emotion Recognition for Stress-Aware

Jun '25 – Aug '25

Real-Time Music Therapy Generation

- Architected a 3-modality emotion recognition system (BERT-Transformer for text at 94% validation accuracy, CNN-BiLSTM for audio, Custom CNN for video at 82% validation accuracy), fusing outputs via a novel Hierarchical Fusion with Adaptive Certainty Weighting (HF-ACW) mechanism trained across 7 emotion classes.
- Engineered a real-time stress-adaptive music therapy pipeline achieving sub-10s end-to-end latency on CPU-only hardware, translating continuous stress scores into dynamically parameterized MusicGen prompts across 12 affective categories; co-authored manuscript submitted to IEEE.

Club Head – NEXUS Technical Club

Jan '24 – Present

- Tracked community growth KPIs across 3 domains, growing membership 10x (20 → 200+) through data-driven outreach and structured peer-teaching sessions.
- Founded NEXUS Community — a peer-teaching program across AI/ML, Web Tech, and Cybersecurity — where 32 technical leads collectively upskilled 200+ recruited students through structured, domain-specific sessions; a first-of-its-kind initiative among PES tech clubs.

Projects

FinNexus – Financial Analytics Platform

- Developed an Agentic AI financial analytics platform using RAG and Groq LLM to identify spending trends, forecast cash flow, and generate automated reports — automating KPI tracking across personal finance categories for 78% of Indians who track but don't act on data.
- Built interactive Chart.js dashboards to visualize transaction patterns and budget utilization across multiple categories.
- Engineered domain-specific prompt pipelines for financial coaching, cash flow forecasting, and tax-saving recommendations targeting the behavioral gap where 78% of Indians track expenses but take no corrective financial action.

Terrathon 4.0 Hackathon - CISCO Problem Statement | Team Lead, AI/ML & Backend Developer | Won 1st Place

- Led AI/ML development of a smart agriculture platform across 5 models — achieving 97% accuracy in plant disease detection across 58 disease classes (InceptionV3, ~60K images), 90.1% in crop recommendation (22 features), and 87.3% R^2 in price prediction (XGBoost + Random Forest) winning 1st place at Terrathon 4.0 CISCO Problem Statement.
- Integrated a multilingual Gemini LLM chatbot for real-time plant disease diagnosis and built a smart irrigation system using XGBoost + Decision Tree achieving 88.5% water efficiency accuracy across 22 soil, climate, and farming variables.

Dynamic Content Stream with Kafka | Big Data Engineering Project

- Constructed a 4-node distributed content streaming platform across a ZeroTier virtual network using Apache Kafka and Flask, implementing a full topic lifecycle managed via a centralized REST API and real-time admin dashboard.
- Designed a multi-threaded producer with automated file ingestion and dynamic topic assignment, paired with a self-updating consumer that subscribed/unsubscribed to Kafka topics in real-time.

Academic and Extracurricular Achievements

- **Winner of Smart India Hackathon Junior 2023** for developing a cross-platform automation system, "SAV4SECURE," focusing on safety and tracking innovations.
- Won **Terrathon 4.0 Hackathon - CISCO Problem Statement** a sustainable hackathon with "Saarthi" an AI based solution for all the farmer's need
